Identifying Duplicates [1]

May 10, 2023 by m.essa [2]

When viewing a contact that the Salesforce duplicate rules identify as a potential duplicate you will be presented with a notification upon loading the page:

aings V i i looks as it duplicates exist for this Contact. <u>View Duplicates</u> X		Q, Search		
	arings 🗸 🚺 🗿	It looks as if duplicates exist for this Contact. <u>View Duplicates</u>	×	Dashboan

There will also be a persistent notification on the right side of the contact layout; above the activities section.

	Log a Call Email 🗨
XWe foun View Dupli	d 1 potential duplicate of this Contact.
Activity	Chatter

Non-Salesforce Identified Duplicates:

There will be instances where the automated duplicate rules do not identify two records as potential duplicates. For example, if the potential student fills out a form on the website with one email address but then provides a completely different one during their application process.

When this occurs, you have the ability to force the system to recognize the records as duplicates using the "Merging" field at the bottom of the contact record.

v Synex Information	
Craned By	Megrq -Nare-
Assaul Nere Assaul Nere Assault Sere Assault Sere As	vf =dtan- Rend
	Send for Carter

Setting this field to "Forced" on the records you want to be identified as duplicates will cause the system to recognize the records as duplicates.

IMPORTANT

This needs to be set on both contact records you want to merge.

Merging Duplicates

Whether the duplicates have been identified by Salesforce automatically or forcibly set via the "Merged" field, the process for merging is the same. Written instructions will come first with notes then screenshots of the process.

- Click the "View Duplicates" link on either the pop up notification when loading a page or the "View Duplicates" link on the duplicates section above the activities section.
- On the Potential Duplicate Records wizard that pops up, select the records you want to merge
 - Make sure you are selecting only the records you want to merge, not all records that are present. There may be instances where another user is forcing the merging of records while you are forcing the merging of records. When this occurs, both of your records will show up here until they are merged.
- Click Next
- This page will show you the discrepancies between the selected records. You will select which values to keep between the two records. You can either select one entire record by using "Select All" or individually select values to keep them.
 - For example, if you Contact A has all the right information except the wrong Program of Interest listed; you can click "Select All" on Contact A and then manually select Program of Interest on Contact B. This will keep all the information from Contact A but use the Program of Interest from Contact B instead.
- Marketing fields that need to be brought over in the merge are:
 - Source Channel
 - Lead Source
 - Pardot Campaign for the corresponding Lead Source/Source Channel selection
 - ANY UTM fields (Term, Source, Name, Medium, Content)
 - Try your best to match "First" UTM values from the contact that was created first.
 - Ad Campaign Name, Ad Name, Ad Set Name
- Either record can be used as the "Master Record" and does not directly influence the merging process from your standpoint. The system automatically keeps the earliest Created Date value.
- Click Next
- Click Merge

This will complete the merging process. One contact record will be removed from the system and the remaining contact will have the values you chose in step 4. All related objects from the removed object (applications, tasks, SMS, etc.) will be reassigned to the single remaining contact.

Step 1:

		Q. Search						
sings 🗸 🕴	0	lt looks as if	duplicates ex	ist for this C	Contact. y	'iew Duplicate	××	Dashboan
					[Log a Call	Email	•
t We	e foun w Duplik	d 1 potent cates	ial duplicat	e of this (Contact.			
Activi	ity	Chatter						_

Step 2/3:

Potential Duplicate Records					
	View Duplicates				
To recept depictes, choose up to 2 contacts. Then shot the ψ Contacts (2)	di and shookar the fields in Kanja.				
- Nene	Station Status	Prove	Email	Centert linener Allee	
 Jacin Involu- 	Propriet	(14) 402-020	8 aninimpeluan	mine	
 Antichergeie 	Propert	(1 M) 462-5285	Saulin@mayerbackin	mhuri	
G				54	

Step 4/5/6:

Potential Dupilcate Records				
Compare contacts Mer par regio de trade recetá a concectó de e recencio-conse ará el electrativo se alterá hara se alterá to e racio d.

Step 7:

	Potential Duplicate Records	
	Confirm merge werestate to response work	
	You've silout all to energy it's are sortiants. You cards under the applega	
loh	۰ <u>۰</u>	Menge

Other Notes:

- Merging cannot be undone. Once a contact record is merged, it is gone forever.
- Up to 3 contact records can be merged at once.
- If there are "Internal" AND marketing terms (Facebook Paid, LinkedIn, etc.) in the Lead Source/Source channel fields, always select the marketing terms.
